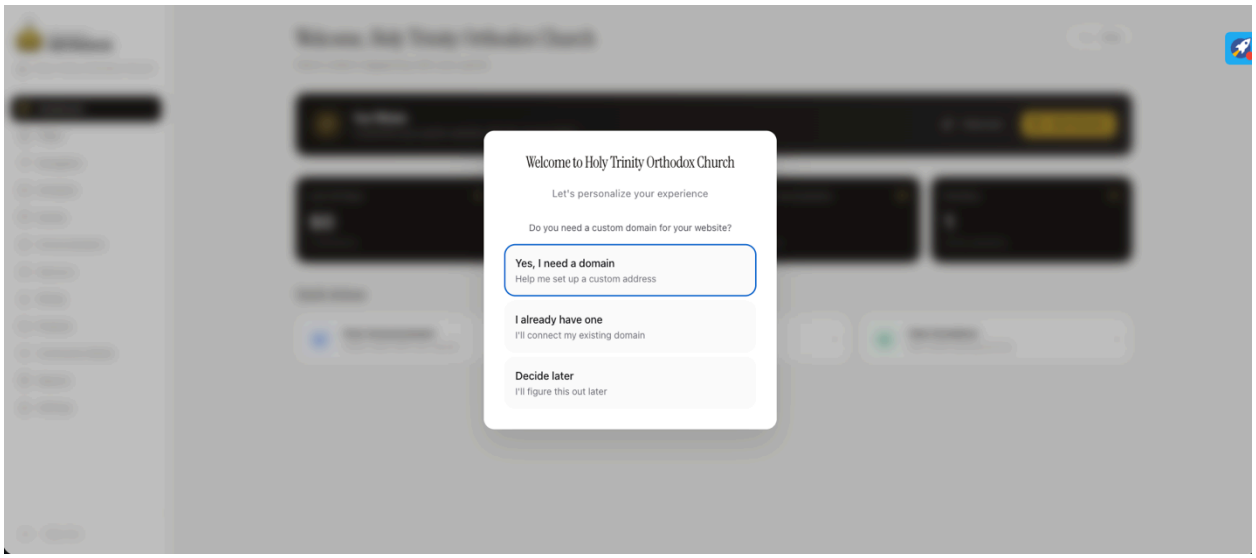
1.



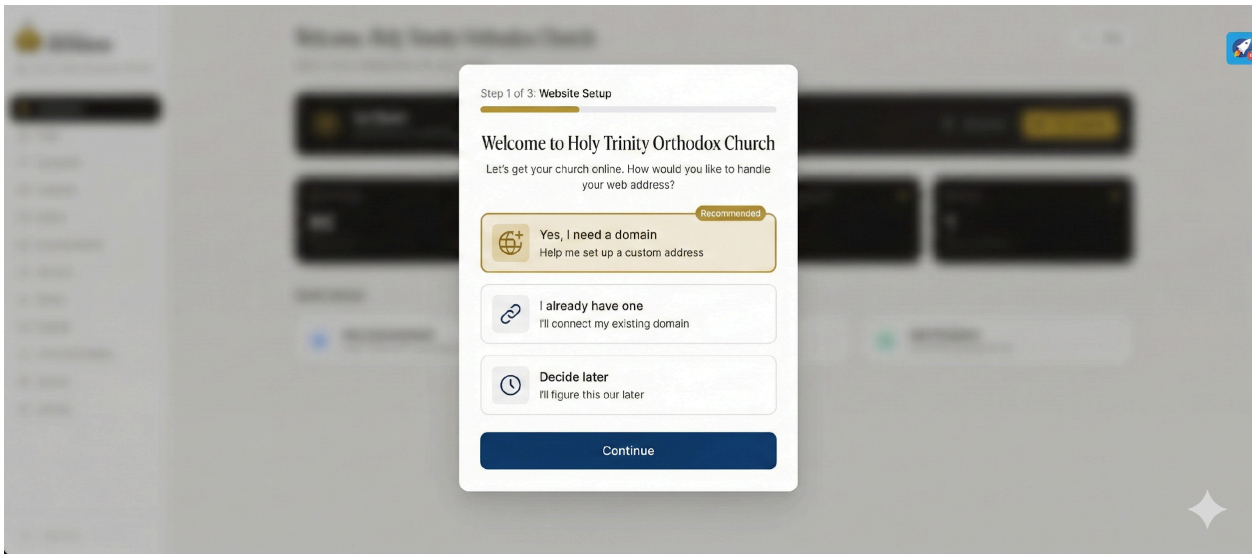
Make the design of the pop up better and more engaging.
Here perhaps it offers as you have made so far:
- Client needs to add a new domain

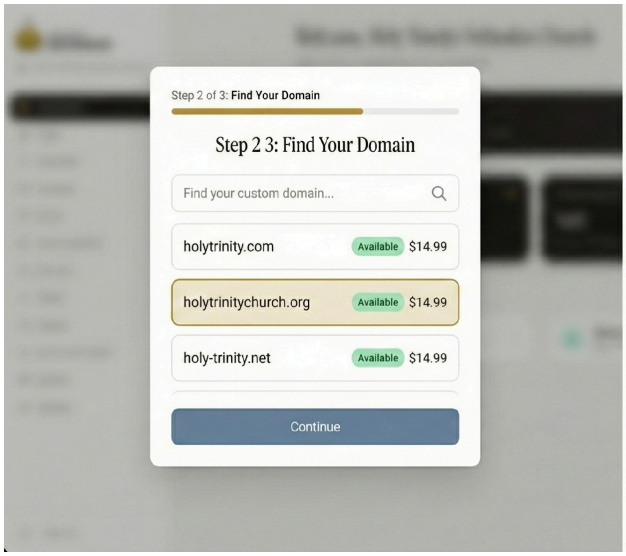
- Needs to connect a existing Domain

- Decide Later

- What are the clients goals? (Increase prescence, share events, collect donations etc)

- Offer a last feature upsell moment with recommended features that have not been chosen yet (Newsletter for $X.XX Recommended, or etc)





Step 2 of 3: Find Your Domain
Step 2 3: Find Your Domain
Find your custom domain...
holytrinity.com

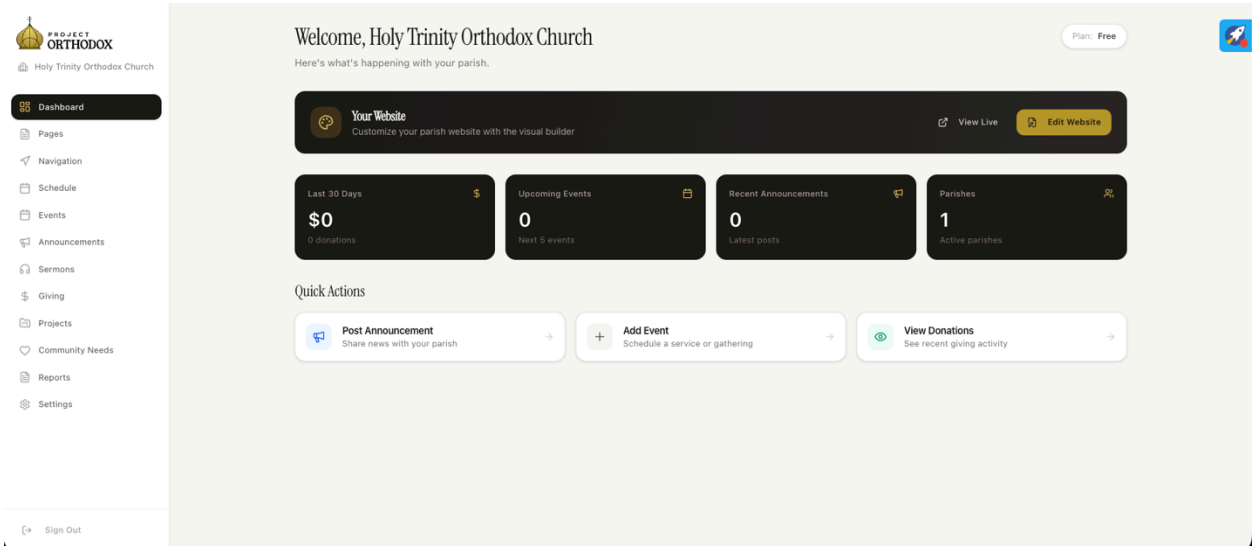
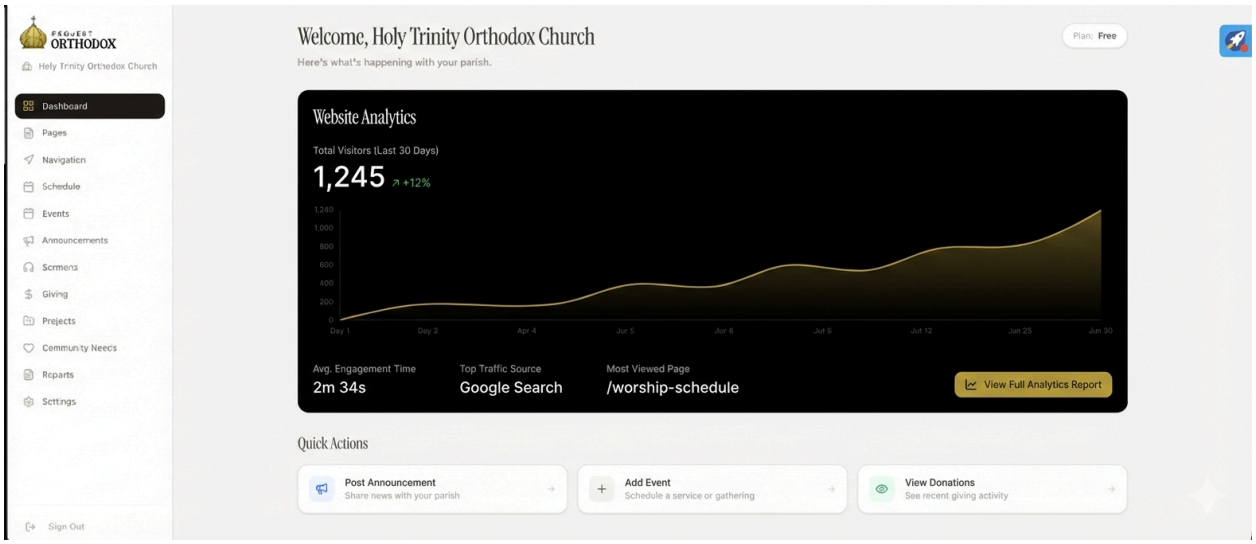
2.

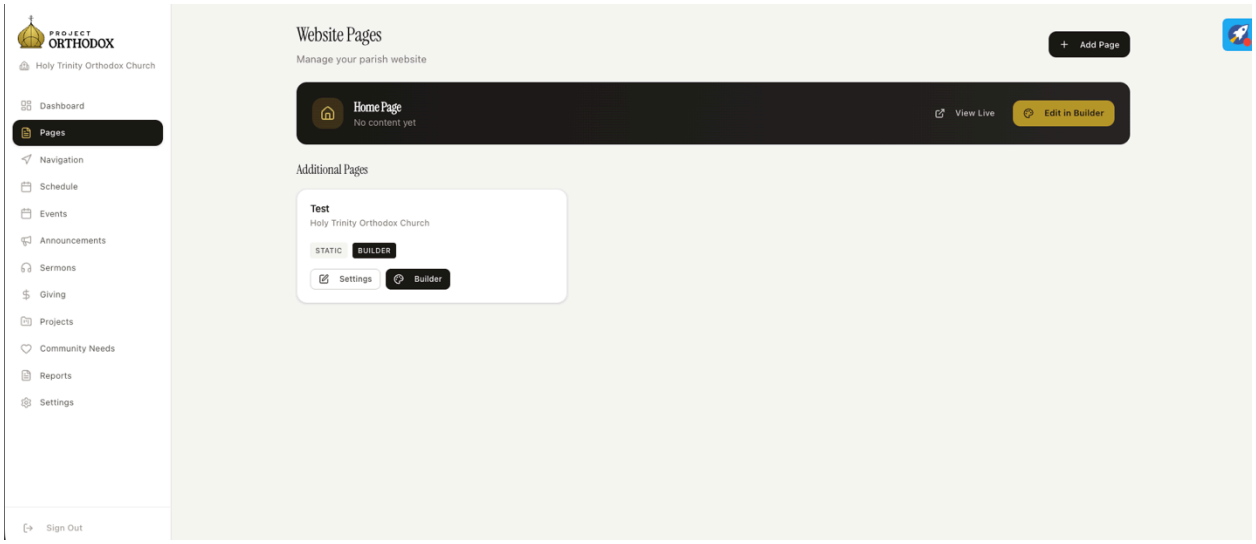


Improve the layout functions and real estate

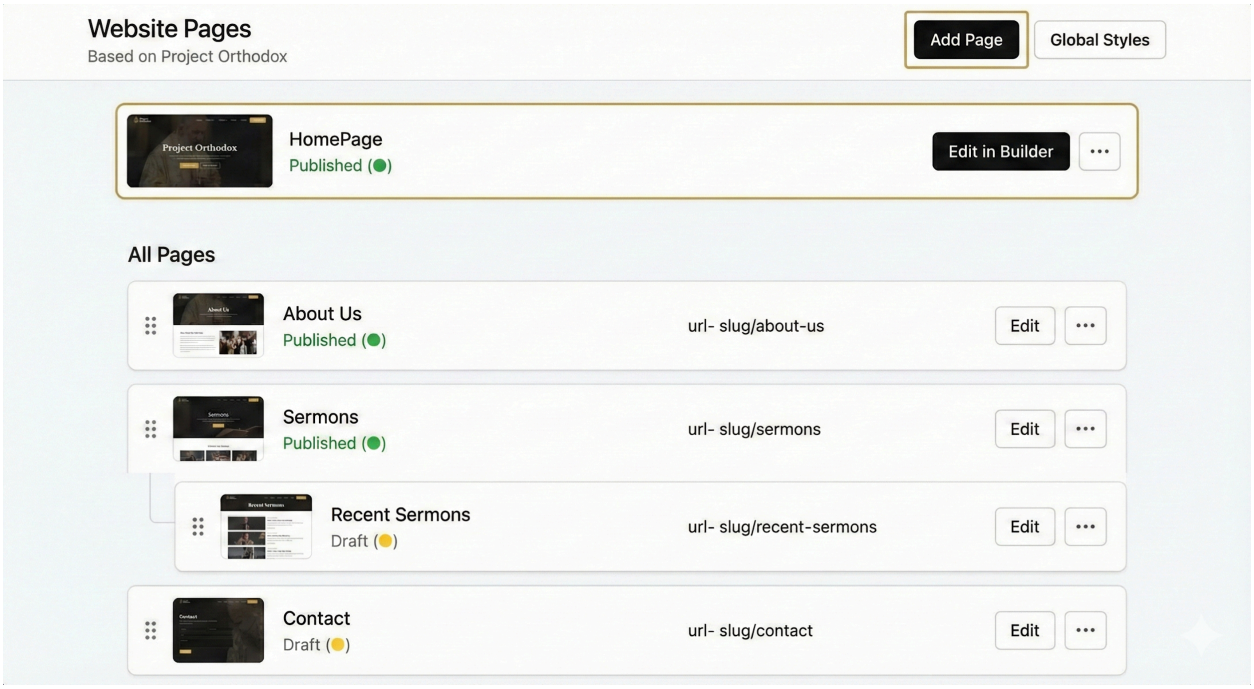
- Have the Plan: Free be a button where a client can change their plan
- I think adding a small native analytics part to the dashboard would be helpful



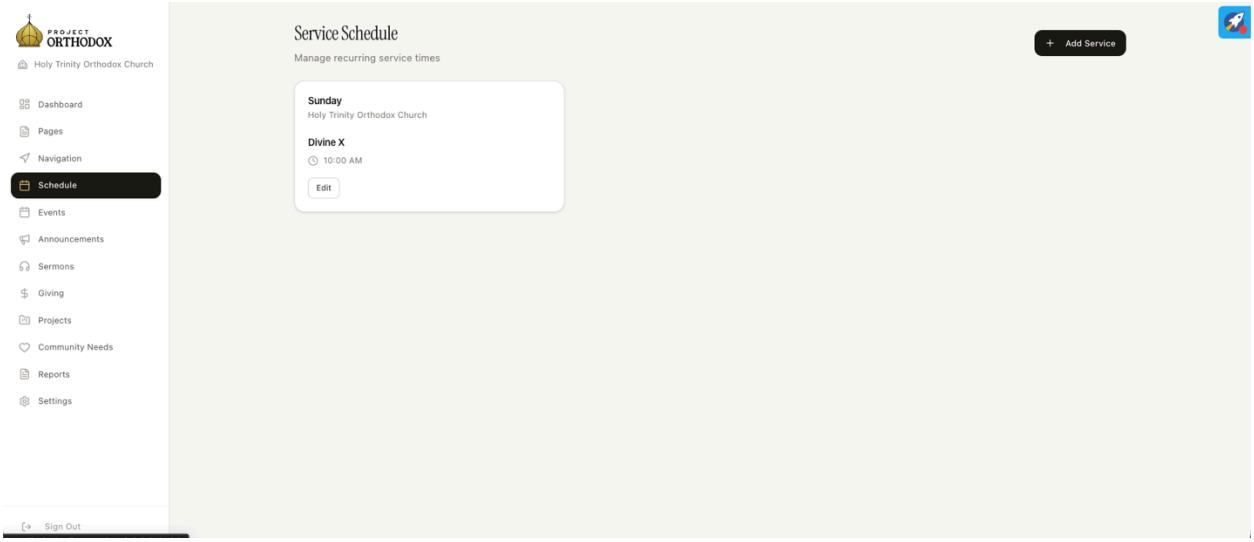
3.



- I think the name of this page is off putting, is this the official website builder page?
- Perhaps this just shows the overall website that the client has and the pages below it as more of the navigation? No need to have the extra navigation page?
- Overall there should be a design website now button on the top header at any point of the dashboard experience?
- Perhaps this page is called design and navigation?



4.



-Have a calendar view (yearly, monthly, weekly, daily)

- Be able to edit or type in directly into the calendar

- Sync calendar for end user (apple cal, google, outlook etc)

- Offer PDF version for end user to download with churches logo

- Schedule / Events pages can probably be one page

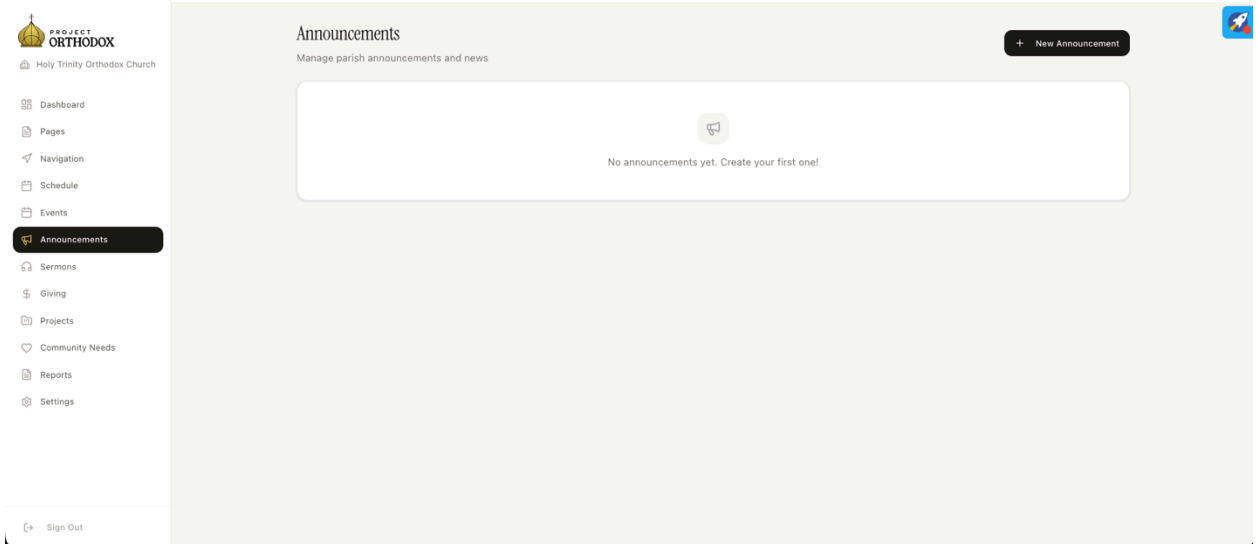
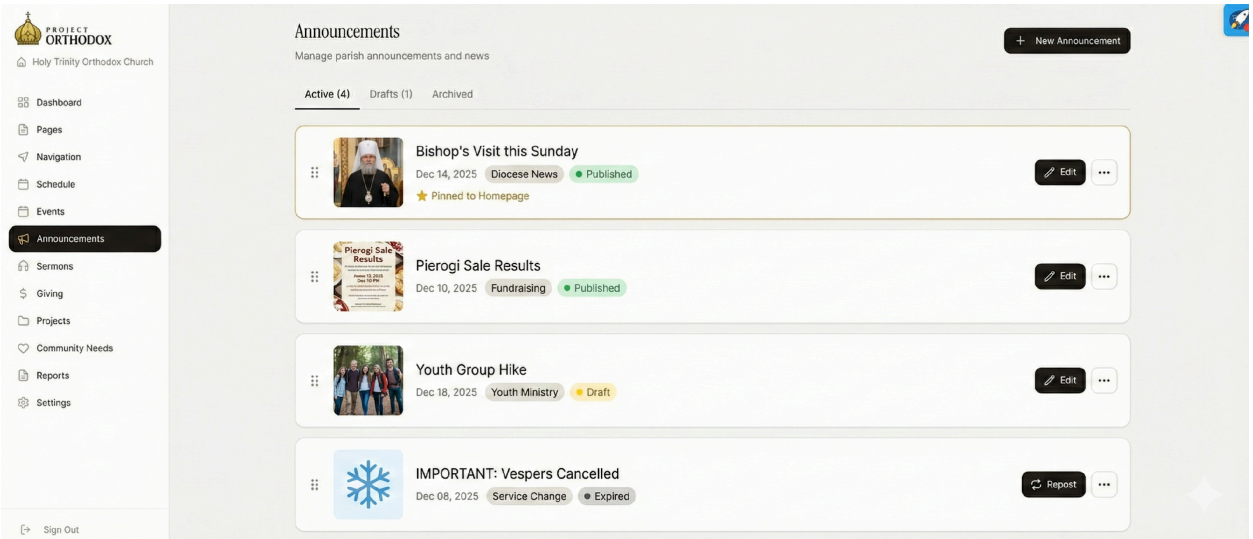
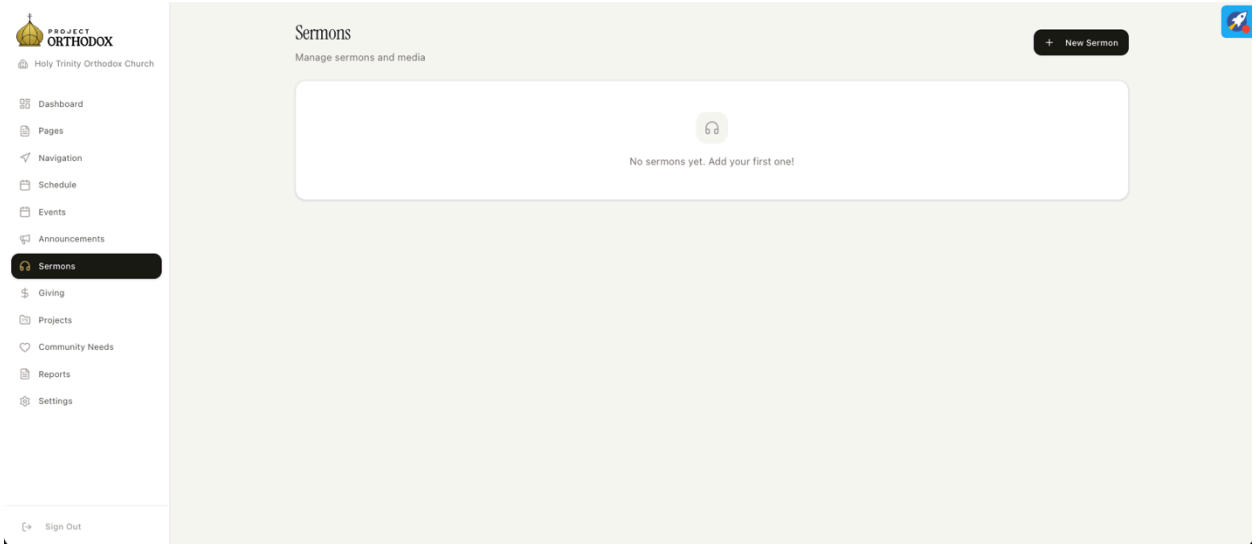
5.



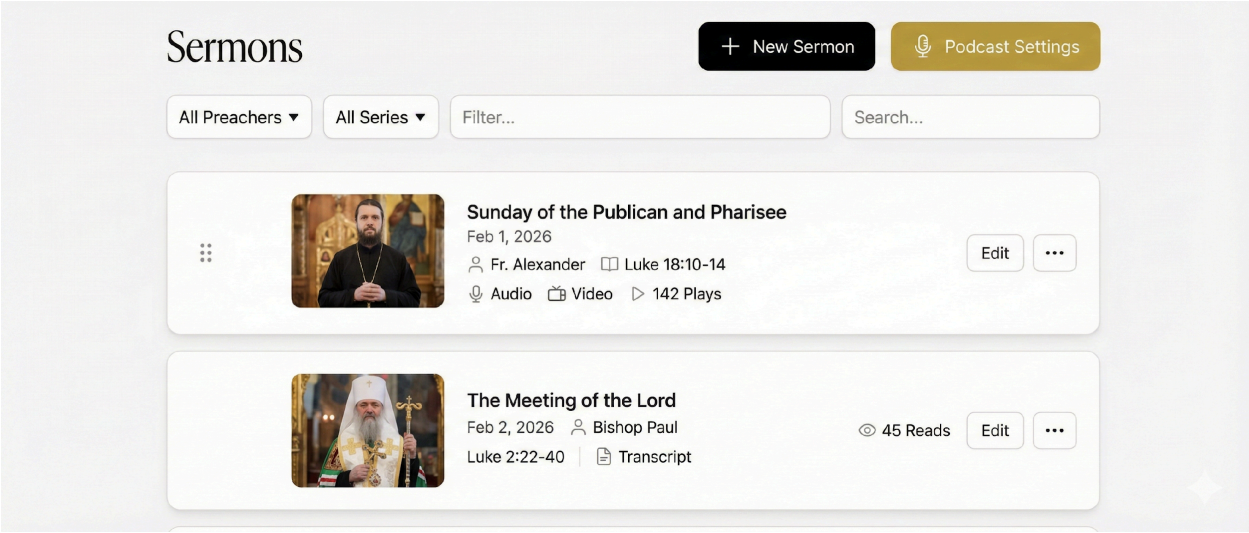
- Here all news, articles or pictures can be added perhaps which would then appear in the actual website builder so it can be shared on the website or social media?
- Show or have a section that can be added to website or not, Baptised this month, Married this month, Reposed in the Lord this month.



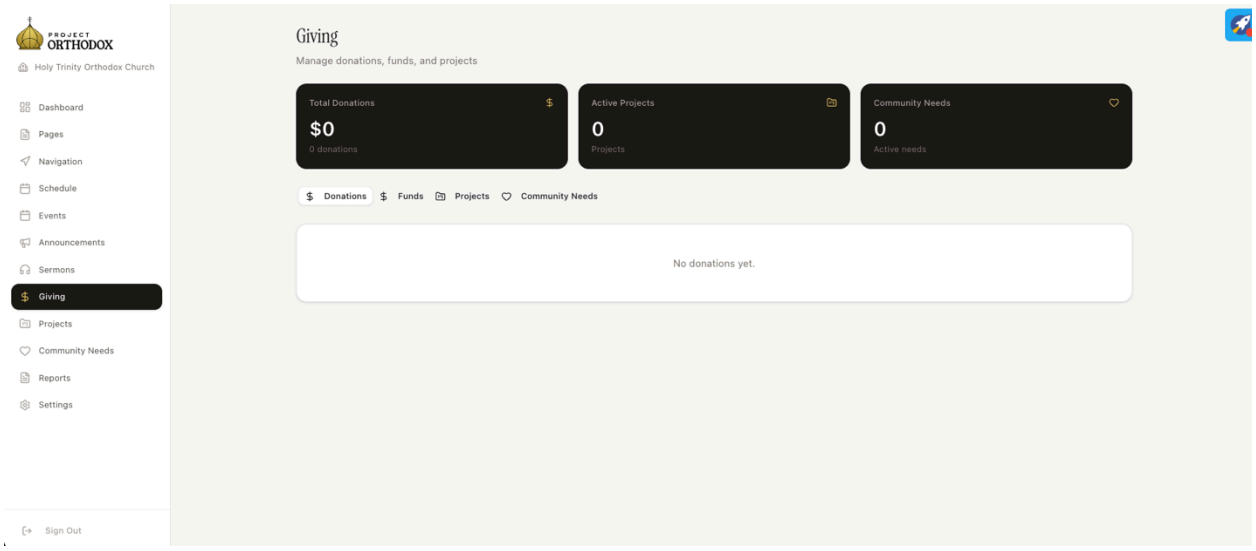
6.



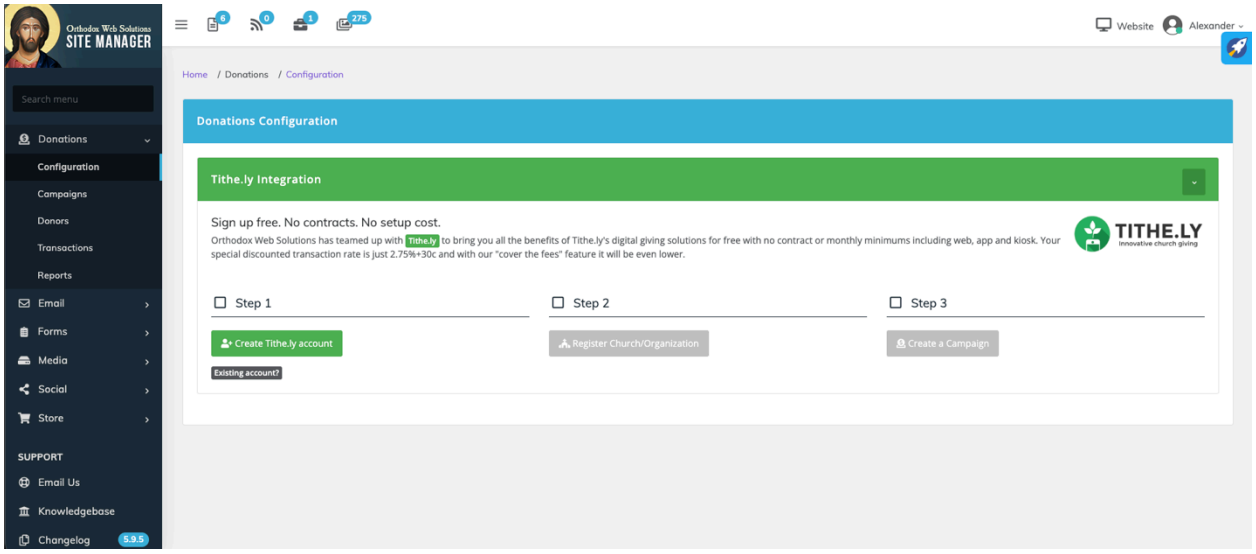
- Combine Livestream and sermons
- Priest can add his sermon or homily after liturgy so it can be shared with the parish via the website builder if they so choose to.
- Here this can be published on youtube or vice versa form youtube here and onto the builder website to people can watch the video and latest video sermon of the church



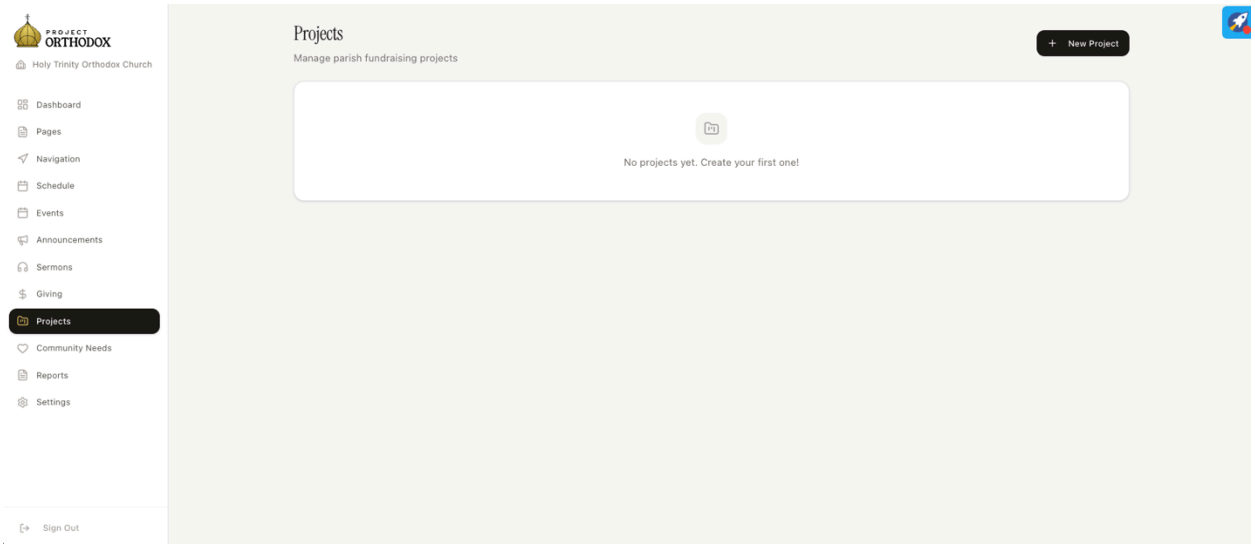
7.



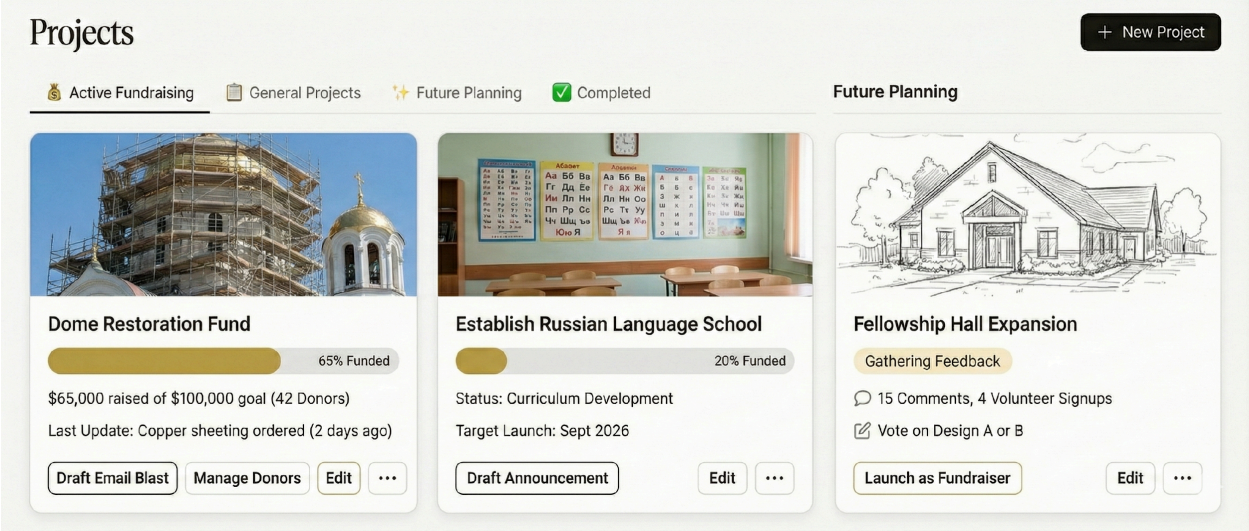
- Connect with a 3rd party like stripe or Tithe.ly to offer a better streamlined service and ask to cover our costs
- Have this connected to the Project Page (which are donation projects like fund our church roof, pay for repainting of church walls etc) also have the donations for Light a Candle, Prayer Request Donation, etc
- Track the various types of donations
- Have community needs as something separate



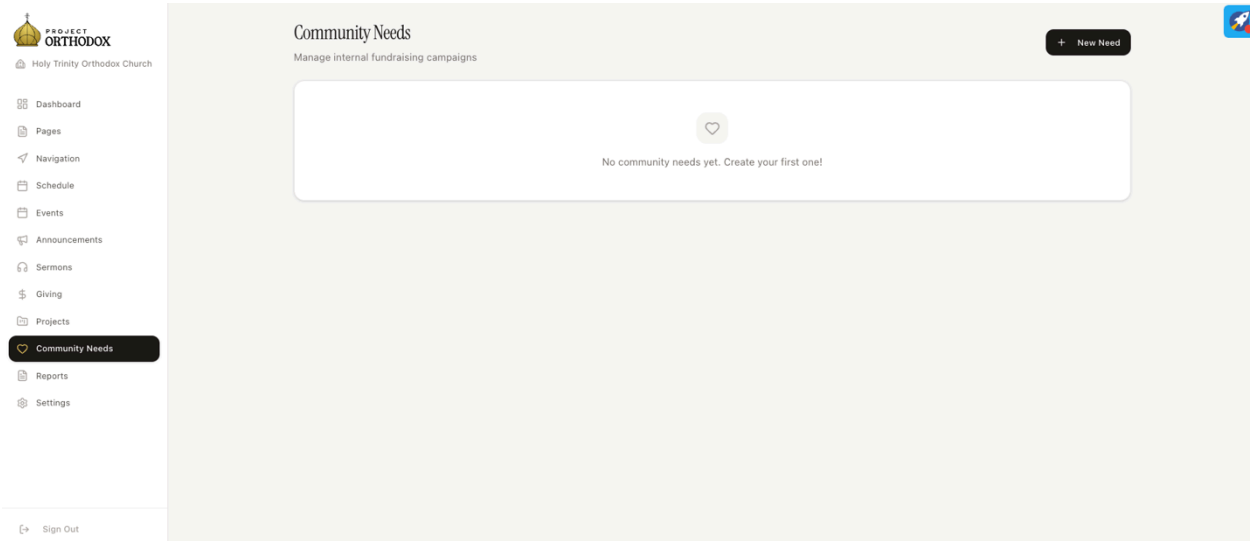
8.



- Projects should be split and build into donation projects and projects the parish/church plans to have or need
- These can be posts which can be integrated into the builder, newsletter etc
- Goal here is get parishioners to donate to projects, share project news and details



9.



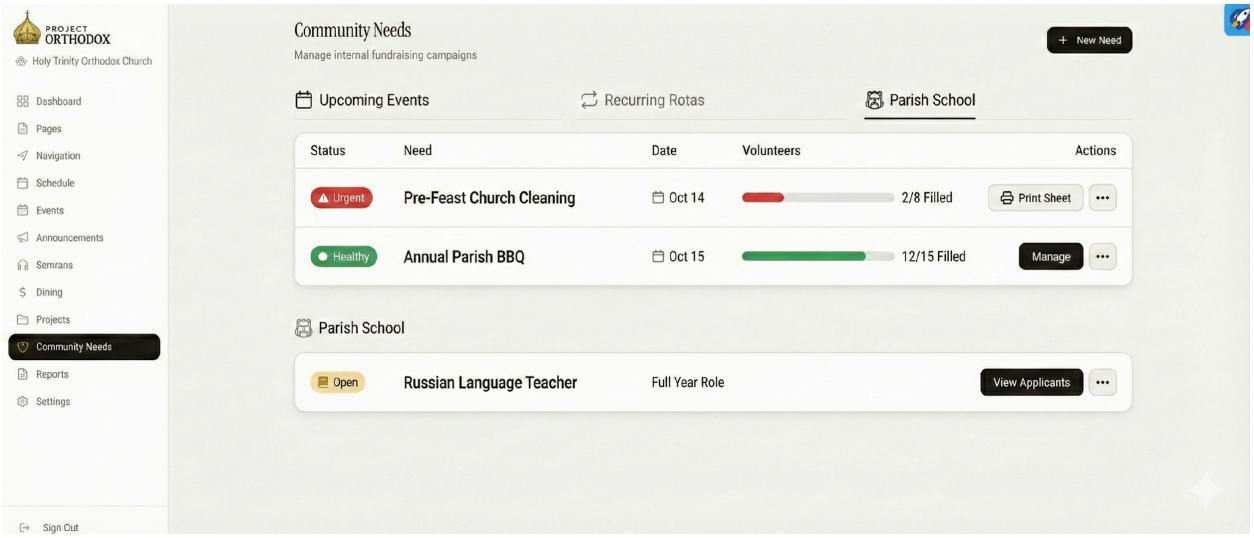
- This where there should be needs for the church or parish. Example like sign up for church cleaning, help setting things up, parish BBQ etc

- Also an important part that is to be shown on website for end users is contact priest or place sign up for A) Blessing of Home B) Counseling / Meet for Tea/Coffee and Chat C) Moleban D) Pannikhida (Prayer for recent departed) E) Sacraments for the Sick/Homebound F) Blessing of Objects G) Catechism sign up

- Any needs the church has for the community, Sunday parish school etc should go here and be shown in the website builder, shared via newsletter etc.

- Tabs or filter chips: All / Volunteer / Supplies / Fundraising / Skills / Announcements

- Search bar + filters: Category, Date/Deadline, Urgency, Recurring, Status (Open/Filled/Expired), Publish (Website/Newsletter/Popup)



Other items needed:

- Social Media connection page
- Newsletter Page
- Offer an Online Store Integration – many churches sell Icons, crosses, books, other items, it is important to have the ability for this.
- Add some Slavic or Church Russian fonts
- A help or support page might need to be made like the comp has (https://accounts.orthodoxws.com/knowledgebase/6/eCommerce) which shows all the FAQs or DIY questions and answers.
- Open a ticket or support section
- Expand the settings page and profile so that more info can be added. (Address, jurisdiction, contact, payment options etc
- Offer an “offline website” those that are building their website but what it shown as “under construction” for now with custom images etc.
- Show activity log of log ins / security etc
